

Introducing the new

T SERIES

Fast. Easy. Versatile.

Tregren

T SERIES

Three times faster growth. No hassle.
This is a reality with Tregren's new
T3, T6 and T12 kitchen gardens.

THE JOY OF SIMPLICITY IS OUR GUIDING STAR WHEN WE DEVELOP PRODUCTS FOR YOUR HOME.

In our new T series we have taken this philosophy further than ever.

With the T series you get great yields without any prior experience in growing your greens – and no effort is required to take care of your plants.

Tregren's T3, T6 and T12 kitchen gardens are all equipped with intelligent software that ensure the plants you grow will flourish.

Tregren's T3, T6 and T12 are controlled through the intuitive SmartGardener app. The SmartGardener app controls the Active Growing Technology™ developed by Tregren.

The Active Growing Technology™ builds upon the latest advances in the growing light technology, optimized hydroponics and the use of specially designed nutrients.

The intuitive SmartGardener app, together with Active Growing Technology™ maintain

the optimal combination of light, water and nutrients, providing ideal growing conditions for the specific plants you grow.

The software includes settings that adjust the light, the irrigation and the nutrients to suit the plants you are growing in your kitchen garden. No prior knowledge of gardening is needed.

Fast

The SmartGardener app together with Active Growing Technology™ ensure ideal growing conditions for your plants resulting in three times faster growth compared to traditional growing methods.

Easy

Minimal effort is needed to ensure high and stable yields. Less than 15 minutes of monthly maintenance is enough for the plants to flourish. Add water weekly and nutrients monthly concurrently with change of water.

Versatile

Tregren's T series is all about freedom of choice, what you grow and how. You can grow herbs, vegetables or flowers. Choose to use pre-grown plants in pots or grow from seeds or cuttings in growing media.

T3

NEW

Compact. Effortless.

SmartGardener

ACTIVE GROWING TECHNOLOGY™

SmartGardener and Active Growing Technology™

SmartGardener

SMART GARDENER APP

Every plant has its own special needs. Some plants need a lot of water when others don't. Some plants need more light than others and some need to grow in a nutrient rich environment to flourish whereas for others this is harmful.

The SmartGardener app configures your Tregren T series kitchen garden to fit the needs of the specific plants you are growing with only one click.

Based on our research and vast experience we have created an intuitive application that will configure your kitchen garden to create the perfect growing conditions for the plants you grow.

The SmartGardener app is unique as it takes care of all the aspects of growing plants. You can even create your own plant programs within minutes.

SmartGardener

ACTIVE GROWING TECHNOLOGY™

To put it simple, with Active Growing Technology™ all of us can enjoy fresh herbs, lettuce and vegetables in our homes all year round.

Active Growing Technology™ developed by Tregren is similar to the method greenhouses use with hydroponics. We have combined our vast understanding of indoor gardening with the industrial use of hydroponics to create products that make indoor gardening easy and successful even for beginners.

The Active Growing Technology™ is a state of the art hydroponic cultivation system where plants are grown in a

ACTIVE GROWING TECHNOLOGY™

soilless aquatic-based environment, where nutrients are distributed via water. Compared to basic passive growing methods, where water and nutrients are distributed through capillary action, the plants grow three times faster with Active Growing Technology™.

The tripled growth speed is enabled by Active Growing Technology™ which is a result of combining an optimal light spectrum, hydroponics where water and nutrients are distributed by a specially designed pumping mechanism. In other words, we have created the perfect growing conditions for the plants.

Tregren

Tregren Ltd is a leading Finnish clean tech company specialized in developing and producing ecological, contemporary and convenient indoor gardens based on Active Growing Technology™.

At Tregren, we believe that the food production is constantly moving closer towards the consumer. Our objective is to develop and manufacture consumer products for urban gardening.

Urban gardening products for consumers are indoor gardens; products for home- and kitchen gardening. Tregren's indoor gardens represent contemporary Nordic design, where functionality and design merge into solid and sound consumer products.

Our aim is to become the leading manufacturer and the forerunner of urban gardening products for both

consumers and businesses. Today we are one of the leading indoor garden companies in Europe.

Our operation started in Finland in 2010. Since then, we have expanded to 15 countries and sold products to more than 40 countries.

Tregren's first product, the Herbie indoor garden, was introduced in September 2010. Since then, we have sold hundreds of thousands of products we developed and manufactured.

Consumer understanding combined with continuous, multidisciplinary

R&D efforts are the key factors to our successful products. The superior consumer experience of our products is a result of the Active Growing Technology™ platform we have developed.

With our latest addition to urban gardening, the SmartGardener app, we can push the envelope even further and enable consumers to grow almost any plant successfully.

Currently we offer three different product lines Herbie, Genie and the T series. These are complemented with a wide range of accessories.

HERBIE

Classic.

ACTIVE GROWING TECHNOLOGY™

Herbie is already a classic among kitchen gardens with its stylish design and superior usability. The Active Growing Technology™ ensures that the different types of plants flourish without any extra effort from you. Herbie is perfect as a kitchen garden as it fits up to six plants. The smart watering system and the specially designed nutrients ensure a continuously high yield without any extra effort.

Herbie is designed to be used with herbs bought from any grocery store or with plants grown elsewhere. You can fit pots with a diameter of up to 11cm in Herbie. Herbie is also well-suited for growing your own plants from seeds.

Herbie combines minimalist design and effortless functionality in one solid product. The highly developed Active Growing Technology™

guarantees a quick growth and large harvests.

All of this with less than 15 minutes of maintenance per month and without the need of previous experience. Consequently, Herbie is a frontrunner in the indoor garden market.

GENIE

Convenient. Genius.

ACTIVE GROWING TECHNOLOGY™

Genie is a small and sophisticated herb garden designed for both outdoor and indoor use, utilizing Active Growing Technology™.

Genie is designed for a wide variety of plants, from flowers to vegetables. The Active Growing Technology™ ensures that the different types of plants flourish without any extra effort from you.

Genie can be used both indoors as well as outdoors. Powered by batteries, the smart watering system enables wireless usability and mobility. The specially designed nutrients ensure a continuously high yield without any extra effort.

Genie is designed to be used with plants grown elsewhere or grown from seeds. You can fit pots with a diameter of up to 15cm in Genie. Genie comes with the latest growing light to improve the yield.

Seed Pods

Tregren's Seed Pods are an easy and effective way to grow herbs and salads ecologically. Seed pods are compressed ecological peat pellets, containing just the right amount of seeds. The peat

pellet has a diameter of 5 cm, and when placed in water they expand to a height of 6 cm. Unused seed pods remain usable for many years, and are ready to grow fresh herbs and salads as soon

as it is placed in water. The package contains two seed pods. Fresh herbs and lettuces are ready for cooking and eating in 3-8 weeks, depending on the plant.

Basil

Bloody Sorrel

Coriander

Dill

Lemon Basil

Lettuce

Lollo Rosso

Mint

Oregano

Parsley

Rocket

Sage

Tarragon

Thyme

Your choice

The newest additions to our seed pods product line are strawberries, tomatoes, jalapeño and habanero. These come with bigger seed pods that ensure that even the highest plants will stand firmly in your Tregren kitchen garden.

Nutrients

TREGREN'S NUTRIENTS ENSURE A SUPERIOR TASTE AND GROWTH FROM YOUR GREENS. WE STRONGLY RECOMMEND THAT YOU ADD THE NUTRIENTS WHEN CHANGING THE WATER IN YOUR KITCHEN GARDEN.

Tregren offers two different nutrients, one for herbs & lettuce and one for fruits & flowers. We have developed these two nutrients to ensure optimal yields for the different varieties of plants.

Our nutrients are developed especially for hydroponics. It's packed in dosage bags to make it easy to use and so that the plants will always get the correct amount of nutrients. The water in Tregren's kitchen gardens should be changed every 3-4 weeks at which time one dosage bag of nutrient shall be added. The nutrient includes potassium, nitrogen, phosphorus, minerals and additives.
